Windows 98 Driver Installation

Do **NOT** plug in the *iDrive*

1. Starts Windows 98.
2. Insert the CD-ROM driver disk in the CD-ROM drive.
3. Run "X:\iDrive\win98\setup.exe". (Letter "X" refers to the CDROM drive location)
4. Connect the *iDrive* to the computer through USB 2.0 cable.
5. In "My computer" you will find a new icon. This is the location of *iDrive*.
6. Now, you are able to access the *iDrive*.

Windows ME / 2000 / XP Driver Installation

Windows ME / 2000 / XP has driver built-in. Plug the *iDrive* into the computer USB port and it will automatically be detected and installed the driver by the computer. After that, go to "My Computer" and you will find a new drive.

Other Cautions:

1. Unplugging the iDrive

When you want to disconnect the iDrive from the computer, always go to the lower right corner of the Windows desktop. And right click on the icon "USB Monitor" and press "Stop USB Mass Storage Device". Failure to do so, it may cause data loss in the cache memory.

2. Power Off

Some of the PC will keep the USB ports and Keyboard with power even when the PC is turned off. Therefore, you must take special caution to make sure the *iDrive* is off power.

3. USB Cable

If you want to use your own USB 2.0 cable, you must ensure that the cable is designed for USB 2.0 High Speed and capable of passing large current for the HD.
